RollNumber	23A51A4298
Project Name	Leave Approval System
Maximum Marks	2 Marks

Problem–Solution Fit: Leave Approval System

Customer Segment (CS): Employees who need to apply for leave and managers who must review and approve requests within an organization. HR administrators are also part of the segment since they track records and compliance.

Jobs-to-Be-Done / Problems (J&P): Employees want a simple, reliable way to submit leave requests and track their status. Managers need an efficient workflow to approve or reject requests without relying on manual paperwork or email chains.

Triggers (TR): Employees act when planning vacations, medical leave, or personal time off. Managers act when they receive multiple requests and need a streamlined process to avoid delays.

Emotions (EM):

- *Before:* Employees feel frustrated, anxious, and uncertain due to delays and lack of transparency. Managers feel burdened by repetitive administrative tasks.
- *After:* Employees feel confident and secure knowing their requests are tracked and notified instantly. Managers feel empowered with a clear, automated workflow.

Available Solutions (AS): Traditional paper forms, email requests, or basic HR portals. These are slow, error-prone, and lack real-time tracking or automation.

Customer Constraints (CC): Limited time, dependency on HR staff, need for mobile accessibility, and requirement for accurate records.

Behaviour (BE): Employees often follow up manually with HR or managers. Managers rely on email chains or spreadsheets to track approvals. Both groups waste time in repetitive communication.

Channels of Behaviour (CH):

- *Online:* ServiceNow portal, email notifications, mobile access.
- *Offline:* HR desk interactions, printed leave forms.

Problem Root Cause (RC): The absence of automation and centralized tracking leads to inefficiency, miscommunication, and inconsistent records.

Solution (SL): A ServiceNow-based Leave Approval System that automates the workflow. Employees submit leave requests via a custom form, the system validates dates, Flow Designer routes requests to managers, and notifications are sent instantly upon approval or rejection. This ensures transparency, efficiency, and reliability.

Leave Approval System
